

Introducing

# FlexOn byphone

A fully functioning hosted phone system  
that makes number management easy

**FlexOn byphone** can replace or work alongside your current phone system. It brings all your phone numbers and devices, both personal and business, under one management system.

**Configure** and **deploy** a phone system in **minutes** with simple drag and drop

Configuring a phone system will never be the same, it's so easy to do, anyone can do it. No manual needed.

## Any device, anywhere in the world.

You could even incorporate a  
[London phone box](#)

## Control devices from your PC We're no longer tied to our desk

FlexOn's VoIP presence panel not only allows you to easily see who's on the phone, it enables you to drive the phone system with a click of a mouse. Simply select the user you wish to call, and the device you wish to call them from.

## Download a mobile or desktop softphone

Download one of our softphones to work flawlessly with your new hosted phone system. Our one click provisioning through QR codes couldn't make setup easier for both partners and end users.

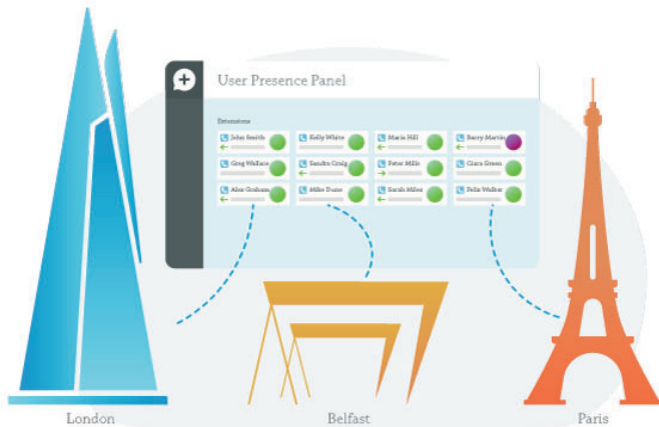

1. Download

2. Scan

3. Go!

## Different locations, 1 screen

Multiple offices in multiple locations, no problem

Our VoIP presence panel enables businesses with staff in different locations to be easily viewed, from one screen. Our hosted phone system will pick up any user, on any device, in any location.

## Gain business and team insights through call analytics

Improve your customer experience by visually understanding how your business is performing, through easy to understand graphs.

## Access and listen in 3 clicks

Say goodbye to complex software

Our award winning software couldn't be easier for a team to manage their call recording and start to improve their customer experience. Our aim is, once logged in, you should find what you're looking for in 3 clicks.

## A powerful modern phone system that can work with the leading CRM systems

Incorporate your hosted phone system into the leading CRM platforms. Click 2 dial, screen popping, call analytics, make the most out of your phone system.

## Integrate your Teams users into your office phone system

Allow your Team to use their Microsoft Devices as part of their byphone extension.

FlexOn allows you to run most of your office on a cloud based phone system while giving some of your users phone system access via teams.

## Choose from a range of desk phones

Our award winning software couldn't be easier for device provisioning. Simply pick from one of our desk, conference or desk cordless phones and plug it in. It couldn't be easier.

## The hosted platform you can rely on

Once a byphone customer or partner, you can have the confidence of reliability. Our VoIP network architecture is designed with optimum up-time in mind.

## Database driven...

Technology has enabled byphone to be radical in design, compared to traditional Telco platforms.

The emergence of Software defined networking (SDN), and the orchestration tools associated with micro services architecture allowed Voxbit to develop a radically different architecture with some significant end benefits for end users.

This means call flows and dial plans are all kept within the DB, along with call records, call recordings, announcements etc. which has allowed for an engaging GUI to drive the DB. This radical approach leads to greater resilience, little down time and great scope for innovation.

**Experience Reliability**
